

About AxiomSL™

Platform for Change

AxiomSL™ is the global leader in data management, regulatory reporting and risk management solutions. Established more than 25 years ago, with offices worldwide, AxiomSL's unique enterprise-data management platform empowers firms to address data governance and risk aggregation while delivering the analytics and reporting required by multiple stakeholders across jurisdictions on a robust, technology-driven Change Management Platform.

CHALLENGES—Managing an environment where regulations, risk, operations, technology and compliance are constantly changing, combined with exponential increases in structured and unstructured data, is very challenging, particularly when budgets are cut and continued growth remains a priority. With these challenges, major firms around the world are now focusing on data lineage, data quality, metadata, and risk aggregation with greater transparency and granularity as they establish a solid data governance foundation capable of addressing evolving risk and regulatory requirements.

Trends—Both the sheer volume and the complexity of regulatory mandates grow each year, and so does the interconnectedness among those mandates and internal business functions. AxiomSL's robust and flexible platform seamlessly integrates clients' source data from disparate systems and geographical locations without forcing data conversion. Unparalleled transparency and granularity offered by a high-performance change management platform means clients' data can be aggregated from multiple siloed systems, enriched, reconciled and validated, and then run through relevant calculations and populated within reports without manual intervention. As a result, AxiomSL's collaboration platform acts as a catalyst in linking a firm's strategic initiatives across all business units.

Benefits—AxiomSL's data and process-driven technology allows firms to leverage their existing data and risk management infrastructure, which reduces operational and implementation costs and achieves greater time to market. With this strategic platform, firms can quickly cope with changes in regulations, risk, finance and compliance to meet the layers of complexity when aggregating risk data for capital adequacy, liquidity, market and risk calculations and disclosure requirements across regional and global mandates. AxiomSL's state-of-the-art technology delivers data lineage, risk aggregation, analytics, workflow automation, validation and audit functionality while supporting disclosures in multiple formats, including XBRL. The platform provides the trusted information needed for effective data governance in order to achieve a global view of the financial firm's risk exposure.

AxiomSL's platform provides both the controlled environment required by Finance/Accounting and the flexibility demanded by Risk.
