2018 SECURITIES INDUSTRY BUSINESS CONTINUITY TEST

Saturday, October 13, 2018

SUMMARY OF RESULTS

Test Led By

Securities Industry and Financial Markets Association
Executive Summary

The 2018 test is part of an ongoing industry-driven backup site testing initiative that began in 2003 and is led by Securities Industry and Financial Markets Association (SIFMA).

The 2018 test followed the format of prior industry-wide tests where firms test connectivity and/or submit test orders and transactions from their backup sites to the markets and industry utilities. The test involved components for Equities, Options, Fixed Income, Market Data, Treasury Auctions, Payment Systems, Service Bureaus and FX. The exercise was supported by all major exchanges, markets and industry utilities. Participation in the test was voluntary and results for specific firms, exchanges, markets and utilities are retained in strict confidence by SIFMA.

Participants in the SIFMA test included approximately 110 securities firms and 71 market organizations. During the test approximately 1,100 communications connections were establish between securities firms and banks and the exchanges, markets and utilities. Test transactions on these connections were successful 98% of the time. These results were generally comparable to prior tests and underscore the ability of the securities industry to operate through adverse conditions. Industry testing to meet the requirements of Regulation Systems Compliance and Integrity (Reg SCI) also took place on October 13, in parallel with the SIFMA industry test. This is the third year in which Reg SCI testing took place alongside the test, which allows for greater efficiency in industry testing, and will occur again in 2019.

In parallel with the SIFMA test on October 13, the Futures Industry Association led a backup site test of the futures exchanges and clients. The futures test results can be found at the link below:

---

1 The Securities Industry and Financial Markets Association (“SIFMA”) brings together the shared interests of hundreds of securities firms, banks and asset managers. SIFMA’s mission is to support a strong financial industry, investor opportunity, capital formation, job creation and economic growth, while building trust and confidence in the financial markets. SIFMA, with offices in New York and Washington, D.C., is the U.S. regional member of the Global Financial Markets Association (“GFMA”). For more information, visit www.sifma.org.
Test Objectives

1. To assess the ability of securities market participants to operate through a significant emergency from their primary or backup data centers and work area recovery sites and to examine the level of resiliency of the markets and the industry overall.

2. To provide firms and exchanges with an opportunity to test and evaluate their backup sites and backup communications with the markets on a single day.

Markets and Utilities Tested

The 2018 test included components for Equities, Options, Fixed Income, Market Data, Payment Systems, Treasury Auctions, and FX.

Market participants included all major exchanges, markets and industry utilities plus major service bureaus and market data vendors. See Appendix A for list of participating market entities.

The Financial Information Forum assisted in coordinating with the services bureaus and market data vendors during the test.

Test Format

Participating firms, exchanges, industry utilities, service bureaus and payment banks, operating from either their primary or backup sites (data center and work area recovery), simultaneously connected and/or submitted scripted test transactions to markets and settlement entities and received simulated confirmations. The test was not intended to be a simulation of any specific real event.

Firms and markets were requested to test from backup locations but, in some instances, this was not technically feasible. For a connection between a firm and a market to be considered a valid test interaction, at least one of the entities had to test from a backup site. A number of exchanges and markets and some firms run multiple “hot” sites as a normal data center configuration. In a multiple hot site configuration, order traffic is routed automatically to one or more of the sites and if a site fails, traffic is automatically shifted to the operational sites. This test did not require shutdown of one of the hot sites. However, firms that do run this type of configuration were encouraged to test from their DR site as opposed to remaining in their Primary configuration.

Reg SCI

In parallel with the SIFMA industry testing on October 14, the industry carried out the second test program as mandated by Regulation Systems Compliance and Integrity (Reg SCI). Nearly all Reg SCI entities took part in both testing programs, offering connectivity testing to interested firms as well more involved testing.
requirements for those firms designated as mandated testers under the rule. In addition, many firms who took part mandated Reg SCI testing also took part in the SIFMA industry test to test their connectivity with other exchanges, as well as for market segments not involved in Reg SCI, such as fixed income, service bureaus, and payments. Due to system constraints around Reg SCI, equity clearance and settlement entities took part in Reg SCI testing but not the SIFMA industry test in 2017.

Test Participants Summary

<table>
<thead>
<tr>
<th>Test Segment</th>
<th>Participants</th>
</tr>

<tbody>
<tr>
<td>Exchanges, Markets and Industry Utilities</td>
<td>44 (Equities, Options, FI, Clearing, FX)</td>
</tr>
<tr>
<td>Securities Firms</td>
<td>110 (Including those testing directly with markets and through service bureaus)</td>
</tr>
<tr>
<td>Service Bureaus</td>
<td>11</td>
</tr>
<tr>
<td>Market Data Vendors</td>
<td>8</td>
</tr>
<tr>
<td>Payment Organizations</td>
<td>3</td>
</tr>
</tbody>
</table>

See Appendix A for a complete list of market entities participating. The names of the participating firms will not be released.

Overall Test Results

There were approximately 1,100 test interactions in the SIFMA test components of which 99% were successful.

The success rate for 2018 is in line with results for the past few years.

Notes: A test interaction is a successful connection between a firm and an exchange, market, service bureau or utility during the test window. Interactions that experienced issues that were corrected during the test window were counted as successful tests.

Types of Issues Resulting in Unsuccessful Test Transactions

The type of issues noted during this year’s test were consistent with issues encountered in prior tests; however the organizations experiencing problems to vary from year to year. Types of problems include:

- General connectivity issues at firms
- System specific configuration issues at firms

Observations and Conclusions

- This test and prior annual industry tests have consistently achieved extremely positive results that underscore the ability of the industry as a whole to operate through adverse conditions.
- One of the primary values of the annual test is the opportunity it provides for firms and markets to test their backup strategies collectively as an industry.
- The types of problems that caused a small number of failures during this test were not so significant that, during a real event, they could not be addressed fairly quickly with full resources.
- The need for firms to regularly and frequently test their backup connections to market entities is critical and in the few cases where there were issues the test provides a valuable opportunity to uncover them.
- Firms should ensure that appropriate controls are in place to manage changes to applications and hardware that may impact backup site connectivity to markets.
- Robust pretesting and ensuring that correct connectivity and test configuration information is shared across the organization is valuable for the most efficient test day experience.
- There was significant value in having providers in DR vs. relying on connections to their Primary systems that are configured as Hot-Hot. We will continue this trend in 2017, while allowing firms the flexibility to test from Primary or DR depending on what is most valuable to them.
- Organizing the industry test in parallel with Reg SCI testing was valuable for test participants, and will be continued in 2018.

## PARTICIPATING MARKET ORGANIZATIONS

### Equities
- NYSE ARCA
- NYSE MKT (AMEX)
- NYSE (CLASSIC)
- NASDAQ
- CHX
- Cboe BZX
- Cboe BYX
- Cboe EDGA
- Cboe EDGX
- OTC Link ATS
- IEX
- DB ATS
- BIDS TRADING
- Dealerweb ATS
- FINRA

### Fixed Income
- NASDAQ Fixed Income
- Dealerweb
- Brokertec (ex-ICAP)
- Tullett Prebon
- TradeWeb Markets LLC
- TMC Bonds LLC
- BondDesk
- MarketAxess
- Bloomberg TOMS
- BNY Mellon
- J.P. Morgan Chase
- Canadian Derivatives Clearing Corp. (CDCC)

### Options
- OCC
- CBOE
- ISE
- NYSE ARCA Options
- NYSE AMEX Options
- NASDAQ OMX PHLX BOX
- Cboe BZX Options
- Cboe EDGX Options
- Canadian Derivatives Clearing Corp. (CDCC)
- MIAX Options
- MIAX PEARL
- Montreal Exchange
- C2

### Treasury Auctions

### Payments
- Fedwire
- CHIPS
- SWIFT

### Market Data
- Bloomberg
- Refinitiv (ex-Thomson Reuters)
- ICE Data Services / eSignal
- SIX Financial Information USA Inc.
- Fidessa
- ICE Data Services / Interactive Data
- FactSet
- OTC Markets Group

### Service Bureaus
- Broadridge BPS
- Broadridge ICI
- Broadridge BPO (Formerly Ridge)
- Thomson Reuters BETA Systems
- FIS Phase 3
- FIS Valdi
- Fidessa

### FX
- Bloomberg FXGO
- Thomson Reuters FXall
- Traiana

### ReadQ
- FlexTrade Systems
- Shadow Financial
