**SIFMA Insights Primers:** The SIFMA Insights primer series is a reference tool that goes beyond a typical 101 series. By illustrating important technical and regulatory nuances, SIFMA Insights primers provide a fundamental understanding of the marketplace and set the scene to address complex issues arising in today's markets. The SIFMA Insights market structure primer series includes: global capital markets & financial institutions; U.S. fixed income markets; U.S. equity markets; U.S. multi-listed options markets; U.S. ETF markets; and U.S. capital formation and listings exchanges. The primers and other Insights reports can be found at: <a href="https://www.sifma.org/primers">https://www.sifma.org/primers</a>

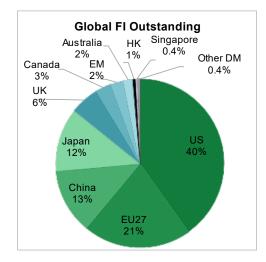

SIFMA is the leading trade association for broker-dealers, investment banks and asset managers operating in the U.S. and global capital markets. On behalf of our industry's nearly 1 million employees, we advocate on legislation, regulation and business policy, affecting retail and institutional investors, equity and fixed income markets and related products and services. We serve as an industry coordinating body to promote fair and orderly markets, informed regulatory compliance, and efficient market operations and resiliency. We also provide a forum for industry policy and professional development. SIFMA, with offices in New York and Washington, D.C., is the U.S. regional member of the Global Financial Markets Association (GFMA). For more information, visit <a href="http://www.sifma.org">http://www.sifma.org</a>.

#### **Executive Summary**

The U.S. fixed income markets are the largest in the world, comprising 40.2% of the \$103 trillion securities outstanding across the globe, or \$41 trillion (as of FY18). This is 1.9x the next largest market, the EU (excluding the U.K.). U.S. market share has averaged 39.5% over the last 10 years, troughing at 37.4% in 2011 and peaking at 41.8% in 2015.

Sources: Bloomberg, Dealogic, Federal Reserve, Refinitiv, US Treasury, US Agencies, SIFMA estimates Note: Outstanding data for ABS and MBS as of 1Q19, the latest data available at the time of publication

## **Chart Book: Total Fixed Income**

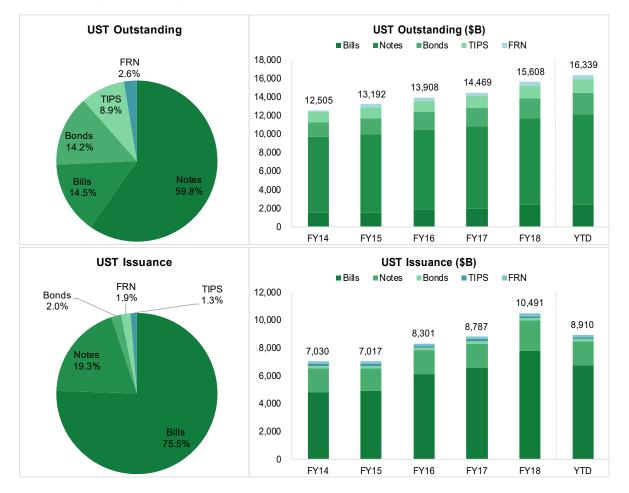

In general, fixed income securities are borrowed capital for the issuer to fund government operations, public projects or corporate investments, thereby fueling economic growth. The diversity of fixed income products both increases the amount of funds available to borrow and spreads credit risk across multiple market participants.

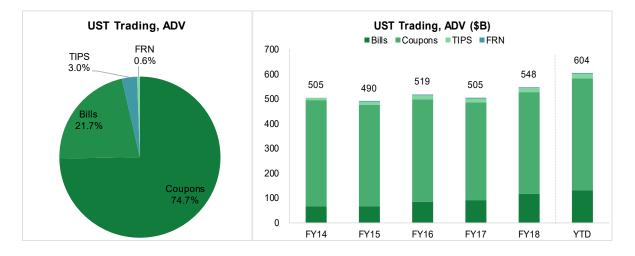

Sources: Bloomberg, Dealogic, Federal Reserve, Refinitiv, US Treasury, US Agencies, SIFMA estimates (MBS/ABS outstanding 1Q19, YTD Sept 2019)

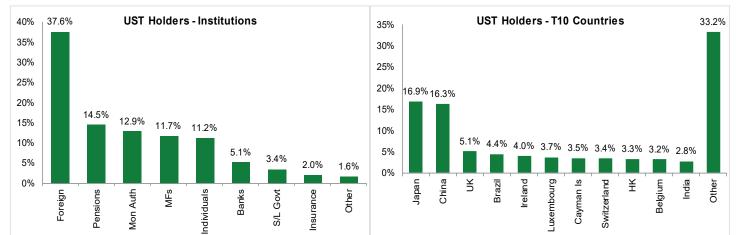

## Chart Book: US Treasuires (UST)

U.S. Treasury securities (UST) are debt obligations of the federal government used to fund operations. Since UST are backed by the full faith and credit of the U.S. government, these securities are considered by market participants as the benchmark credit. The U.S. government has a AAA rating, meaning it has essentially no credit risk and can easily meet its financial obligations on time and in full. In light of this, UST show a diversity of holders, in both institutional type and foreign holders.

Sources: US Treasury, New York Federal Reserve, Federal Reserve, SIFMA estimates (YTD = Sept 2019)

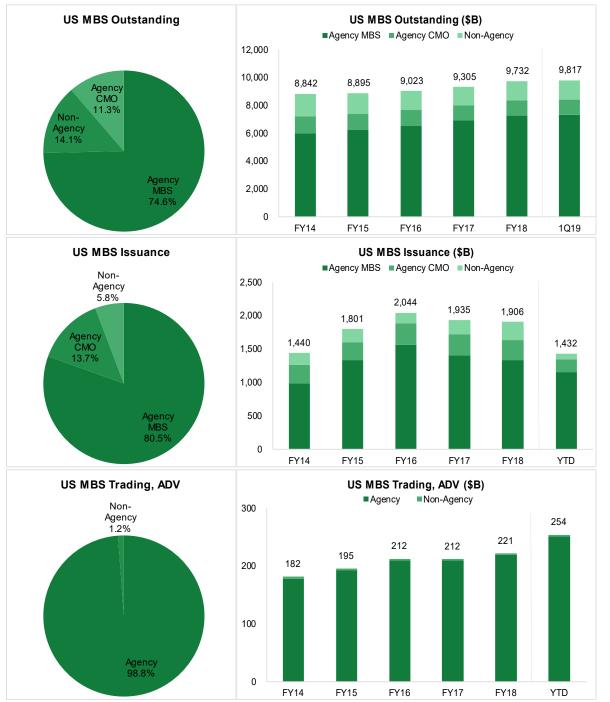

Sources: US Treasury, New York Federal Reserve, Federal Reserve, SIFMA estimates (YTD = Sept 2019)

## Chart Book: Mortgage-Backed Securities (MBS)

Since mortgages (a debt instrument collateralized by a specified real estate property) are less liquid than other investment vehicles, they can be securitized into mortgage-backed securities (MBS), whether in pass-throughs or collateralized mortgage obligations (CMOs).

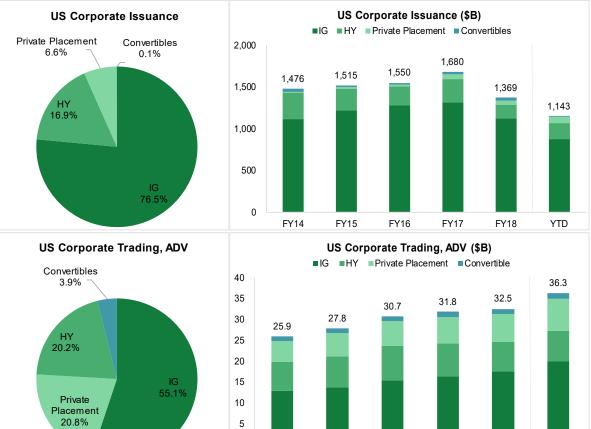

Sources: Bloomberg, US Agencies, FINRA, SIFMA estimates (YTD = Sept 2019)

## **Chart Book: Corporate Bonds (Corporates)**

Corporate bonds (corporates) are debt securities issued by public and private corporations. They are issued to raise money to fund investments or expansion plans. Corporates are considered riskier than UST, and receive ratings by credit ratings agencies to determine creditworthiness, i.e. probability of repayment of debt in a timely manner.

## **Chart Book: Municipal Securities (Munis)**

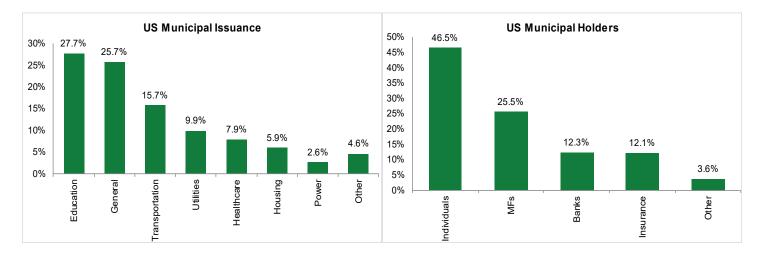

Municipal bonds (munis) are debt securities issued by state/local governments or government agencies and public entities (utilities, school districts) to fund public projects, predominantly infrastructure related. Efficient muni markets enable states and municipalities to borrow at low rates and finance capital expenditures over a longer time period.

#### **Chart Book: Municipal Securities (Munis)**

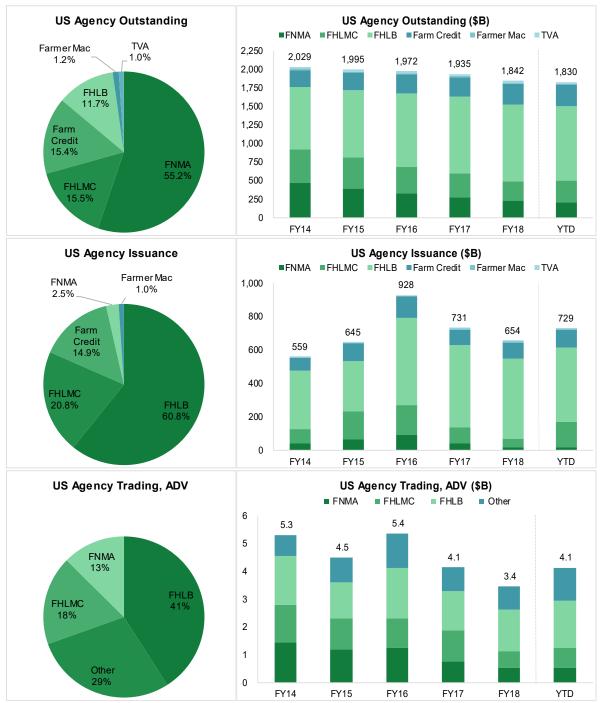

Source: Refinitiv, Bloomberg, Municipal Securities Rulemaking Board, SIFMA estimates (YTD = Sept 2019)

## Chart Book: Federal Agency Securities (Agency)

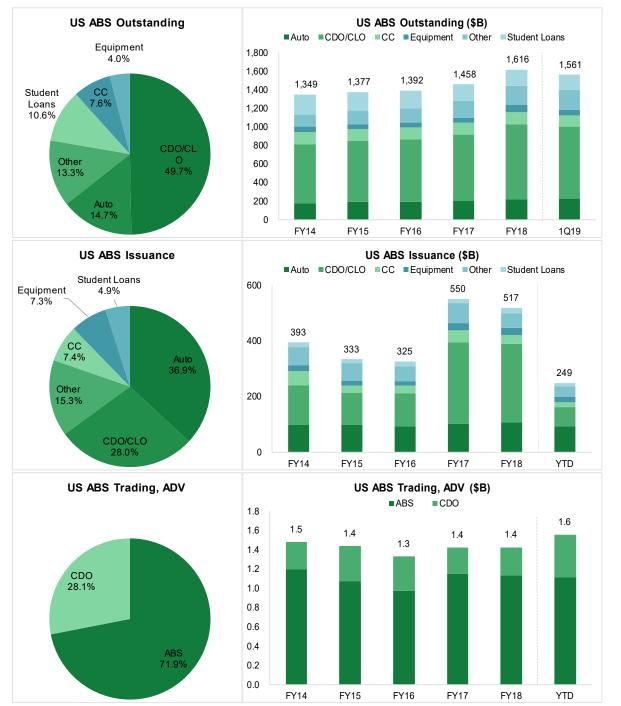

Agency securities are issued by quasi-governmental agencies (federal government, government sponsored enterprises) to fund operations. Unlike UST or munis, these securities are not always fully guaranteed by the U.S. or a municipal government. As such, they can hold credit and default risk.

Source: US Agencies, FINRA, SIFMA estimates (YTD = Sept 2019)

## Chart Book: Asset-Backed Securities (ABS)

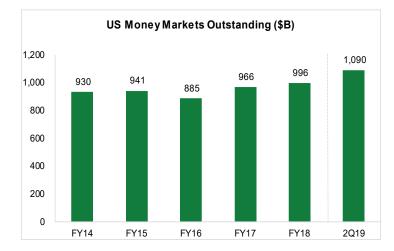

An asset-backed security (ABS) is a financial security collateralized by a pool of typically illiquid assets such as auto loans, student loans, credit cards, etc. Pooling these assets creates a more liquid investment vehicle, with a valuation based on the cash flows of the underlying and the structure of the transaction.

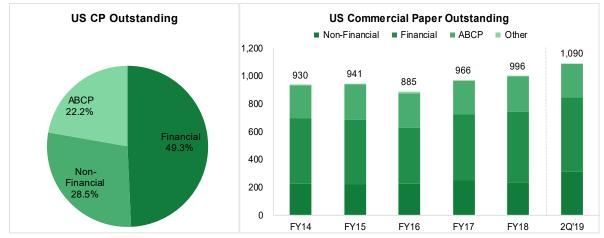

Source: Refinitiv, Bloomberg, FINRA, SIFMA estimates (YTD = Sept 2019)

#### Chart Book: Money Markets (MM)

The money markets (MM) involve highly liquid, short maturity (typically overnight to less than one year) financial instruments (certificates of deposit/CDs, bankers acceptances, commercial paper/CP, etc.), used by investors to borrow and lend in the short term. Transactions in the money markets are wholesale, taking place only between institutional investors (no individual investors) and for large denominations.

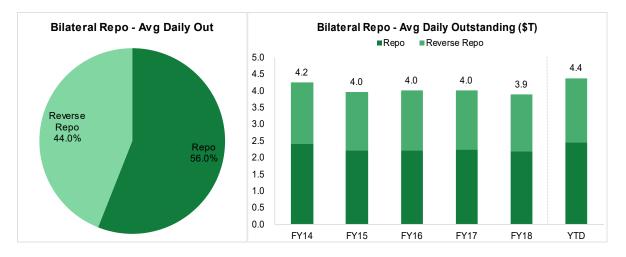

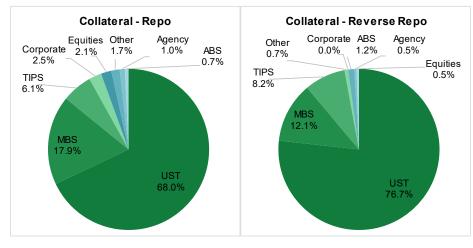

Source: Federal Reserve, SIFMA estimates

#### Chart Book: Repurchase Agreements (Repo)

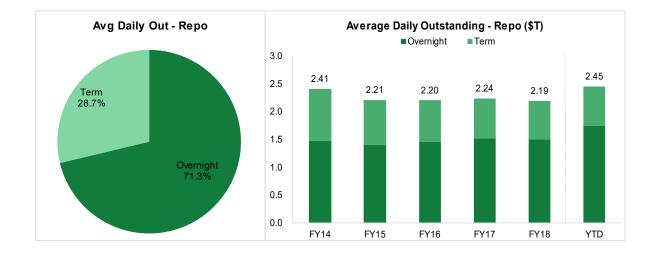

A repurchase agreement (repo) is a financial transaction in which one party sells an asset to another party with a promise to repurchase the asset at a pre-specified later date (a reverse repo is the same transaction seen from the perspective of the security buyer). Repos can be overnight (duration one day) or term (duration up to one year, albeit some are up to two years and the majority are three months or less). The repo market enables market participants to provide collateralized loans to one another, and financial institutions predominantly use repos to manage short-term fluctuations in cash holdings, rather than general balance sheet funding. Repos aid secondary market liquidity for the cash markets (ex: UST), allowing dealers to act as market makers in a very efficient manner.

## Chart Book: Secured Overnight Financing Rate (SOFR)

In the U.S., the transition away from London Interbank Offered Rate (LIBOR) to its chosen alternative reference rate, Secured Overnight Financing Rate (SOFR), is underway. While LIBOR is not fully transaction based, SOFR is based on the overnight repo markets with ~ \$1 trillion of transactions per day. Publication of the SOFR rate began in April 2018. Trading and clearing of SOFR based swaps and futures began in May 2018.
