SIFMA is the leading trade association for broker-dealers, investment banks and asset managers operating in the U.S. and global capital markets. On behalf of our industry's nearly 1 million employees, we advocate on legislation, regulation and business policy, affecting retail and institutional investors, equity and fixed income markets and related products and services. We serve as an industry coordinating body to promote fair and orderly markets, informed regulatory compliance, and efficient market operations and resiliency. We also provide a forum for industry policy and professional development. SIFMA, with offices in New York and Washington, D.C., is the U.S. regional member of the Global Financial Markets Association (GFMA). For more information, visit <http://www.sifma.org>.

A Brief Background

The emergence of the global pandemic Covid-19 in the first quarter of 2020 has caused severe economic and capital markets shocks. In light of these market dislocations, SIFMA Research is tracking daily market metrics (prices, volumes, rates) across equities, listed options and various fixed income and securitized products markets. Additionally, we show the trends for the first quarter.

The turmoil is evidenced by the sharp price declines – yet spikes in volumes – in equities markets. U.S. equities closed the first quarter with their worst performance since the financial crisis:

- The S&P 500 closed at 2,584.59 (-21%), the DJIA at 21,917.16 (-24%), the Nasdaq at 7,700.10 (-15%) and the Russell 2000 at 1,153.10 (-31%).
- Meanwhile, the CBOE Volatility Index (VIX¹) jumped to 53.54 from just 12.47 to start the year (+329%), peaking at 82.69 (+563%).
- We note that throughout this period of extreme volatility markets remain open and functioning as intended.

The pandemic also created enormous one-way flows from risk to safe assets, and the ability to absorb flows was beyond the capacity of the financial system. This created substantial liquidity constraints in many fixed income and securitized products markets. In an attempt to rectify the situation, the Fed undertook unprecedented actions to buy financial assets, unclog the pipes of the financial system and increase its capacity. This included robust purchases of UST, agency MBS and agency CMBS.

The Fed's actions were followed by multiple phases of fiscal stimulus, enacted by Congress and the U.S. Treasury to support the economy.

¹ A real-time market index that represents the market's expectation of 30-day forward-looking volatility, as derived from the price inputs of the S&P 500 index options. It measures market risk and investor sentiment (fear, stress) and is often called the fear index.

Daily Market Metrics: As of the close on 5-29-20

In this section, we note current prices/rates and analyze changes on a near-term basis and since the start of the year. We track prices and volumes across the major equity market indices, as well as the VIX. We also track consolidated ADV for equities, ETFs and listed options. For fixed income and securitized products, we track various bond rates and indices across UST, corporate bonds, munis and other products.
