Executive Summary

The U.S. financial system, with nearly \$23 trillion in assets¹, is a large, complex system set up to serve the needs of individuals, corporations, and governments of all sizes. Since the global financial crisis, financial institutions and regulators have worked to shore up the strength and resiliency of the system. Using the Federal Reserve's Comprehensive Capital Analysis and Review (CCAR) firms as a proxy for the system, this quarterly report provides a snapshot of the current landscape. (Please see the Appendix for methodology and firm lists.) We analyze select income statement, balance sheet and regulatory ratio statistics and trends, which show this group of firms has much higher capital levels and healthier balance sheets than during the global financial crisis. We highlight the following trends: (aggregate of all CCAR firms, unless indicated)

- Income Statement
 - Total revenue: 2Q23 \$200.8 billion, -0.9% Q/Q; YTD \$403.5 billion, +11.9% Y/Y

Regulatory Ratios

Non G-SIBs are held to a 7% minimum Basel III CET1 requirement. The G-SIBs are held to various levels of an additional buffer based on BIS methodology (please see the Appendix). We compare the average ratios for all CCAR firms and non G-SIBs to the maximum G-SIB requirements, inclusive of the highest buffers. This emphasizes the excess capital and liquidity held by financial institutions of all sizes. In general, there has been substantial growth in regulatory ratios across all categories of banks.

Common Equity Tier 1 (CET1) Capital Levels

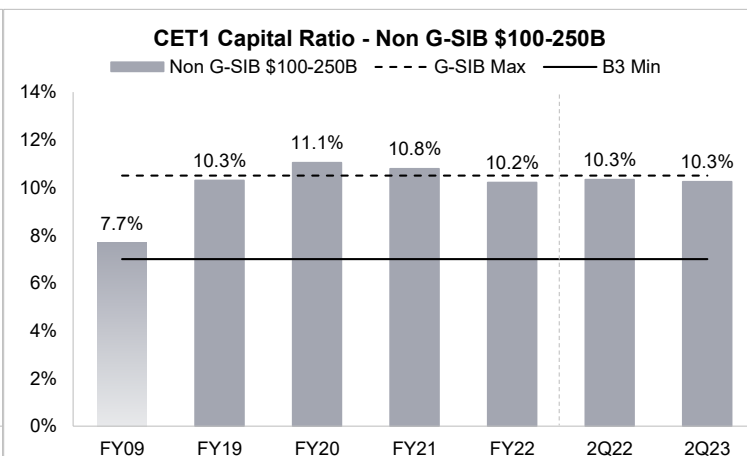

Source: Bloomberg, SIFMA estimates

Note: Capital levels may fluctuate with changes in regulations/taxes/laws

CET1 Capital Ratios

Currently, the maximum CET1 ratio inclusive of the highest surcharge would be 9.5% (no G-SIBs are currently in bucket 5). Yet, all firms are above the full maximum level of 10.5%.

Source: Bloomberg, SIFMA estimates

Note: Capital levels may fluctuate with changes in regulations/taxes/laws. Basel III minimum = 7.0%

Tier 1 (T1) Capital Levels

Source: Bloomberg, SIFMA estimates
 Note: Capital levels may fluctuate with changes in regulations/taxes/laws

Tier 1 (T1) Capital Ratios

Source: Bloomberg, SIFMA estimates
 Note: Capital levels may fluctuate with changes in regulations/taxes/laws. Basel III minimum = 6.0%

Tier 1 (T1) Leverage Ratios

Source: Bloomberg, SIFMA estimates
 Note: Levels may fluctuate with changes in regulations/taxes/laws. Basel III minimum = 3.0%

Supplementary Leverage Ratio (SLR)

Liquidity Coverage Ratio (LCR)

Source: Bloomberg, SIFMA estimates

Note: Levels may fluctuate with changes in regulations/taxes/laws. SLR: requirements are for G-SIBs only; Basel III minimum = 3.0%, U.S. regulatory minimums = 5.0% at the bank holding company and 6.0% at the bank. LCR: Basel III minimum = 100%; lack of available data in Bloomberg at the time of this report to populate other groups

Total Loss Absorbing Capital (TLAC) Ratios

Source: Bloomberg, SIFMA estimates

Note: Levels may fluctuate with changes in regulations/taxes/laws. TLAC holdings standards for loss-absorbing and recapitalization capacity in resolution for G-SIBs only. RWA = risk-weighted assets. LTD = long-term debt. Basel III minimums: TLAC/RWA = stated as around 2x capital, or 16-18%, but we use the max of 18.0%; TLAC/leverage exposure = 7.5%; LTD/TLAC = 33.0%; LTD/RWA = 7.5%; LTD/leverage exposure = 4.5%

Appendix: Methodology

When analyzing the charts in this report, please note the following:

- We analyze the 22 U.S. CCAR⁵ banks as a proxy for the entire U.S. financial system; we do not include the U.S. operations of foreign banks included in CCAR given lack of data
- We further split the banks into subgroups
 - All 22 CCAR firms
 - The 8 global systemically important banks (G-SIB), as identified by the Bank for International Settlements' (BIS) methodology
 - The 4 non G-SIB firms with assets over \$250 billion
 - The 10 non G-SIB firms with assets between \$100 and \$250 billion
- While the firms included in CCAR have changed over the years, we perform this analysis with the current group of firms
- Ratios and other data may fluctuate over time with changes in regulations, laws or tax codes
- The time series goes back to 2009 for regulatory ratios, but the G-SIB methodology was not published until November 2011 – therefore, firms were not “below” requirements, the requirements did not exist

⁵ Comprehensive Capital Analysis and Review = a U.S. regulatory framework introduced by the Federal Reserve to analyze, supervise, and regulate the bank holding companies of large financial institutions
