### Statistics

# Quarterly Report: US Equity & Related, 2Q26

Primary Markets: Equity Capital Formation

Other Investment Banking: M&A and Private Equity

Secondary Markets: Market Performance, Volatility, & Volumes

Published: July 2026

### Key Takeaways for 2Q26

In 2Q26, U.S. equities rebounded in 2Q26 after a volatile and uneven performance in the previous quarter driven by easing of the U.S.-Iran conflict, with oil prices dropping roughly 30% for the quarter. Robust corporate earnings reported during the period also contributed to strong price moves. The S&P 500 ended 2Q26 at 7,49.36 (+14.9% Q/Q, +20.9% Y/Y), the Nasdaq Composite rose to 26,213.72 (+21.4% Q/Q, +28.7% Y/Y), the Dow Jones Industrial Average finished at a record 52,319.20 (+12.9% Q/Q, +18.7% Y/Y), and the Russell 2000 increased to 23,024.37 (+21.2% Q/Q, +39.0% Y/Y) as small caps led annual returns.

After a more volatile 1Q26, the VIX decreased to a quarterly average of 18.4% (-2.1 pps Q/Q, -5.3 pps Y/Y). Volumes for equities and options posted another record highs last quarter: equity ADV 20.2B shares (+1.1% Q/Q, +9.9% Y/Y) and options ADV 72.8M contracts (+5.7% Q/Q, +27.3% Y/Y). ETF ADV decreased to 4.7B shares (-17.3% Q/Q, +25.6% Y/Y).

Total equity capital formation was \$198.5B (+231.9% Q/Q, +249.0% Y/Y) driven largely by the SpaceX IPO on June 12, which raised a record \$86.2B. Total IPOs were \$121.6B (+1,020.6% Q/Q, +1,409.5% Y/Y). Market cap of all US listed companies totaled \$76.9T in 2Q26 (+16.5% Q/Q, +22.4% Y/Y) and the number of listed companies stood at 5,532 (+0.7% Q/Q, +2.1% Y/Y).

Note: Y/Y figures for the quarter show changes for 2Q26 vs 1Q26.

---

## Appendix: Definitions & Purpose

---

- **Capital Formation:** Companies may need capital for various business purposes. Earlier stage companies may need additional capital to grow to the next stage in the business life cycle. Companies also may need capital to expand organically or via acquisition, for example product or regional diversification. Companies utilize capital markets to acquire capital in many ways. Some of the equity issuance vehicles include:
  - o Initial public offering (IPO): A private company raises capital by offering its common stock (equity) to the public in the primary markets for the first time. Securities are issued at an established price, and the process is facilitated by investment banks acting as financial intermediaries. Shares then continue to trade in the secondary market on exchanges or other trading venues.
  - o Secondary offering (secondaries, or follow-ons): Sale of shares by a company that has already IPOed. A non-dilutive offering is when one or more major shareholders sell all or a large portion of their holdings; proceeds from this sale are paid to the selling shareholders. A dilutive offering involves creating new shares and offering them for sale to the public; proceeds go to the company.
  - o Preferred stock (preferreds): Give owners a priority claim to dividends, providing investors a more stable cash flow relative to common stock. While cash flows present more bond-like traits – without the commitment to repay principal – shares behave more like common stock.
  - o Special purpose acquisition companies (SPAC): Have no commercial operations – often called blank check companies – and are established solely to raise capital through an IPO for the purpose of acquiring unspecified existing companies.
- **Markets**
  - o Dow Jones Industrial Average (DJIA): A price weighted index that tracks 30 large, publicly owned companies trading on U.S. exchanges. It had historically been a widely watched benchmark index for U.S. blue-chip stocks.
  - o S&P 500: A market capitalization weighted index of the 500+ largest U.S. publicly traded companies. The index is regarded as the best gauge of large-cap U.S. equities.
  - o Nasdaq Composite (Nasdaq): A market capitalization weighted index made up of over 3,000 equities listed on the Nasdaq stock exchange. Its composition remains over 50% technology stocks (this percentage has come down over the years).
  - o Russell 2000: A market capitalization weighted index representing 10% (the bottom two-thirds aggregate market cap) of the Russell 3000 index, a larger index of 3,000 publicly traded companies that represents 97% of the investable U.S. stock market. The index is regarded as a gauge of small cap, U.S. centric companies.
- **Volatility**
  - o CBOE Volatility Index (VIX): A real-time market index that represents the market's expectation of 30-day forward looking volatility, as derived from the price inputs of S&P 500 index options. It measures market risk and investor sentiment (fear, stress) and is often called “the fear index.”

- **Volumes**

- o ADV = average daily volume = sum of volumes over the time period divided by the number of days in the time period.
- o The U.S. equity markets are the largest and among the deepest, most liquid, and most efficient in the world. Investors enjoy narrow spreads, low transaction costs and fast execution speeds, with plenty of opportunity for price improvement, especially for retail investors.
- o Exchange-traded funds (ETFs), or pooled investment vehicles holding an underlying basket of securities (equities, bonds, commodities, currencies), provide investors a multitude of choices to meet different investment objectives.
- o Options, or a contract granting the right to buy or sell an underlying security (stocks, ETFs) at a specified price on or before a given date, are frequently used as risk management tools by investors to hedge positions and limit portfolio losses. They also provide flexibility, enabling an investor to tailor their portfolio to investment objectives and market environment.

## Appendix: SIFMA Research Reports

---

SIFMA Research: [www.sifma.org/research](http://www.sifma.org/research)

- **Quarterly Reports:**
  - o Equity and Related: Capital formation (IPOs, other issuance statistics); market performance (index prices); volatility (VIX); cash equities, ETFs, and multi-listed options volumes; exchange market shares and landscape; equity market capitalization and number of listed companies.
  - o Fixed Income – Issuance & Trading: Issuance and trading metrics for U.S. Treasuries, mortgage-backed securities, corporate bonds, municipal securities, federal agency securities, and asset-backed securities, as well as ESG issuance statistics; and rates update (Treasuries, mortgage, SOFR).
  - o Fixed Income – Outstanding: Outstanding balances for U.S. Treasuries, mortgage-backed securities, corporate bonds, municipal securities, federal agency securities, asset-backed securities, money markets, and repurchase agreements; and rates update (Treasuries, mortgage, SOFR).
  - o US Banks: financial (income statement and balance sheet metrics) and regulatory (ratios on capital levels and more) data for CCAR firms, essentially a proxy for the financial services industry.
- **Capital Markets Fact Book:**
  - o Global: Equity and fixed income markets data on outstanding, issuance, volumes; the investment banking landscape; and international securities transactions.
  - o U.S.: Equity, fixed income, derivatives, and private placement markets data on outstanding, issuance, volumes, and index prices, as well as mutual fund and ETF statistics; the investment banking landscape; household liquid financial asset breakout, household equity ownership, and holders of equities; retirement asset breakout and mix across asset classes, savings rates, and other economic indicators; federal balance sheet overview; number of broker-dealers, registered representatives, registered investment advisors, and branch offices, along with state maps for that data; and industry financial overview.
  - o **Monthly Metrics and Trends**: highlights of interesting market trends, as well as statistics on equity market performance, volatility, and equity and options volumes.
