Executive Summary

The U.S. financial system is a large, complex system set up to serve the needs of individuals, corporations, and governments of all sizes. Since the global financial crisis, financial institutions and regulators have worked to shore up the strength and resiliency of the system. Using the Federal Reserve's Comprehensive Capital Analysis and Review (CCAR) banks as a proxy for the system, this quarterly report provides a snapshot of the current landscape. (Please see the Appendix for methodology and firm lists.) We analyze select income statement, balance sheet and regulatory ratio statistics and trends, which show this group of banks has much higher capital levels and healthier balance sheets than during the global financial crisis. We highlight the following trends (aggregate of all US CCAR firms, unless indicated):

Income Statement

- Total revenue: \$270.8 billion, +8.0% Q/Q, +20.2% Y/Y

Regulatory Ratios

Non G-SIBs are held to a 7% minimum Basel III CET1 requirement. The G-SIBs are held to various levels of an additional buffer based on BIS methodology (please see the Appendix). We compare the average ratios for all CCAR firms and non G-SIBs to the maximum G-SIB requirements, inclusive of the highest buffers. This emphasizes the excess capital and liquidity held by financial institutions of all sizes. In general, there has been substantial growth in regulatory ratios across all categories of banks.

Appendix: Methodology

When analyzing the charts in this report, please note the following:

- We analyze the 22 U.S. CCAR⁴ banks as a proxy for the entire U.S. financial system; we do not include the U.S. operations of foreign banks included in CCAR given lack of data
- We further split the banks into subgroups:
 - o All 22 CCAR firms
 - o The 8 global systemically important banks (G-SIB), as identified by the Bank for International Settlements' (BIS) methodology
 - o The 8 non G-SIB with assets over \$250 billion
 - o The 6 non G-SIB with assets between \$100 and \$250 billion.
- While the firms included in CCAR have changed over the years, we perform this analysis with the current group of firms.
- Ratios and other data may fluctuate over time with changes in regulations, laws or tax codes.
- The time series goes back to 2009 for regulatory ratios, but the G-SIB methodology was not published until November 2011 – therefore, firms were not “below” requirements; the requirements did not exist.

⁴ Comprehensive Capital Analysis and Review = a U.S. regulatory framework introduced by the Federal Reserve to analyze, supervise, and regulate the bank holding companies of large financial institutions
